## When the Truth Needs Backup

### Introducing the WOLFCOM Vision™

**It's the World's First Body Camera with a 2 Camera System**

**Utilizing Critical Reconnect Technology!**

Now up to 23 Hours of battery life!

WOLFCOM® is proud to introduce its newest addition to its body worn camera line.

The **Wolfcom Vision™**. Designed and assembled in Los Angeles, California. This new unit is Wolfcom's vision for the future. It's the world's smallest, lightest, secure, and most versatile law enforcement body camera in the market today. The new Wolfcom Vision's design and creation is a result of hundreds of pages of feedback from professional law enforcement worldwide and from Wolfcom's 20 years of combined knowledge, experience, and expertise in the specialized field of personal body worn camera systems for law enforcement and private investigators.

**Price List**

Item	Description	Price	Item	Description	Price

- Covert Pinhole Button Camera for Plainclothes Detectives
- Night Vision capable with External Night Vision Camera
- In-Car Camera Capable
- Programmable Public Awareness Light
- Password Protected

# What is Critical Re-Connect and why is it Important?

## Critical Re-Connect Technology (CRC)

Developed by Wolfcom Enterprises, this Patent Pending technology protects the user from loss of audio and video recording should the external camera or POV (Point of View) camera become detached from the main recording unit.

The Wolfcom Vision police body camera is the very first body camera system in the world with "Critical Reconnect Technology" that will protect an officer in that critical moment when his head or collar mounted camera is yanked off during a struggle with a suspect. Many headset type body cameras incorporate a one camera system. This means that if the camera gets yanked off or destroyed, all audio and video will be lost.

The Wolfcom Vision™ works on a two camera system. The primary headset camera records the main event and the secondary on board camera acts as an emergency backup. In the event the headset camera is ripped away, the secondary camera will resume audio and video recording of the incident. The Wolfcom Vision accepts different types of headset cameras including cameras that can be attached to the glasses, hat, baseball cap, and helmet.

In this setup the officer wears the Vision™ body camera on his chest and clips the Eye Vision camera onto his glasses.

The Eye Vision camera now works as the primary "Point of View" (POV) camera and the Vision acts as a backup.

With our Critical Reconnect Technology, should the Eye Vision camera become disconnected during a fight with a suspect, the Vision body camera will resume recording of the audio and video.

## Alerts

As soon as the main recording unit senses that the external POV camera has been disconnected, it will vibrate to alert the user that the external POV camera has been disconnected and will then activate its built-in camera and microphone to resume audio and video recording.

# Specifications

\* Environmental conditions may increase or decrease specification

<b>Model Number: Wolfcom Vision</b>	
Camera Head Rotation	(-15) degree to (+105) degree
Field of View	120°
Sensor sensitivity	1 LUX
Video resolution / FPS	1920x1080p (30 FPS); 1280x720p (60 FPS); 1280x720p (30 FPS); 848x480 (60FPS); 848x480 (30FPS); 640x480 (60FPS); 640x480 (30FPS)
Aspect Ratio	16:9 Aspect Ratio
Video formats	.MOV / MPEG4
Algorithm (Compression)	H.264
Audio/Video Settings	Audio Configurable (On or Off) during Video recording
Photo resolution	16M/12M/8M/5M/3M (M=Megapixels)
